Office Action Summary	Application No. 10/597,170	Applicant(s) WESSLING, BERNHARD	
	Examiner Edward J. Cain	Art Unit 1796	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5, 20 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wessling et al (5,720,903) in view of Wessling et al (5,567,355).

Wessling et al '903 discloses intrinsically conductive polymer particle dispersions (abstract). The conductive polymers are taught as suitably polyaniline and as having conductivities of between 25 and 250,000 S/cm (claim 1). These polymers are taught as dispersed in non-polymeric polar liquids (claim 11) and as being subjected to shear forces to increase the conductivity (claim 2).

This reference fails to explicitly recite particle sizes for the polyaniline.

The Wessling et al '355 reference is cited as disclosing similar polyaniline dispersions wherein the polyaniline has a particle size of less than 500 nm (abstract).

It would have been obvious to one of ordinary skill in the art to use polyaniline powder with particle size of 500 nm or less in the compositions of the primary reference when film thickness dictated.

Claims 6-19 and 22-23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
